

'Qora' the Indigenously Developed Fecal Incontinence Management System Launched (Download PDF)

(May 23, 2016)

'Qora' an indigenously developed affordable Faecal Incontinence Management System (FIMS) has been launched by Union Minister of State (MoS) for Science & Technology Y. S. Chowdary in New Delhi. Under the Union Ministry of Science & Technology's Department of Biotechnology (DBT) Bio design Programme the FIMS-Qora was established by M/s. Censure Medical.

What is Fecal incontinence?

- Fecal incontinence (FI) is a medical situation noticeable by incapability to control one's bowel movements.
- It origins feces (stool) to leak unpredictably from the rectum.
- This medical disorder worldwide affects almost 100 million bed cantered patients.
- Still around 50 % of the psychiatric ward patients due to long-term nervous sicknesses have FI.
- At present time the only available solutions for this situation are porous pads and fecal drainage feeds.

Significance of FIMS-Qora

- This inexpensive novel knowledge will help to address the clinical and economic suggestions of FI by growing indications for use.
- It will also help in dropping skill level mandatory to use a device, and presenting a new level of care for patients outside the ICU.
