Mouse

Pointing device.

An input device.

Offers an alternative way to interact with the computer beside a keyboard.

Douglas Englebart with assistance of Bill English created the first mouse in the early 1960's and was patented on November 17, 1970.

Mouse buttons

A typical mouse has two buttons. At the top of the device you will find a left and right button which allows for “clicks”. There is a scrolling wheel between the two buttons.

You will use a single left click to select a task from a menu or to use a tool on the toolbar. You will use a double click to open a program.

Functions of mouse

- Holding the mouse:** Use which ever hand feels most comfortable.
- Left Click:** To single click, press the left mouse button lightly and release it immediately.
- Double Click:** To double click, press the left button twice in quick succession.
- Right-Click:** The right click can be used as a short cut to open an option menu.
- Click, hold and drag:** Click once, hold the button down and roll the mouse to drag movable items across the screen.
- Wheel.** A mouse will often have a small wheel between the buttons. When you roll this wheel, the page will move up or down (also known as **scrolling**).
